

CANDIDATE'S DECLARATION

We **Mili Srivastava (205433)** and **Rachit Bharadwaj (205445)** students of B.Tech. (InformationTechnology) at Uma Nath Singh Institute of Engineering and Technology, VBS Purvanchal University, Jaunpur, declare that the work presented in this Project Report titled “**Web 3.0 and Blockchain Based Decentralized Social Connectivity Web Application**” submitted to the **Department of Information Technology** for the award of Bachelor of Technology degree in Information Technology. All the work done in thisproject report is entirely our own except for the reference quoted. To the best of our knowledge, this work has not been submitted to any other university or Institution for the award of any degree.

ABSTRACT

The "Decentralized Social Media Web Application" project presents a groundbreaking approach to social networking by leveraging decentralized technologies. Developed with Next.js for the frontend, Solidity for Ethereum smart contracts, MongoDB for user data management, and IPFS for decentralized storage, the platform prioritizes user privacy, security, and data ownership. Users can register, create and edit posts with IPFS integration, engage in social interactions, send messages, and manage profiles. The application's decentralized nature, driven by IPFS and Ethereum smart contracts, ensures tamper-resistant content storage and trustless transactions. The project aims to address the shortcomings of centralized social media, offering a decentralized alternative that empowers users and embraces the principles of transparency, security, and user control.

This decentralized social media web application not only addresses current challenges but also positions itself for scalability and future innovation. The modular architecture built with Next.js allows for seamless scalability of the frontend, ensuring a responsive and dynamic user interface as the platform grows. The integration of Ethereum smart contracts provides a foundation for potential future functionalities, including the implementation of decentralized autonomous organizations (DAOs) and novel token-based incentives, fostering a community-driven ecosystem. Scalability and innovation are crucial aspects as the platform evolves to meet the ever-changing needs of its user base.

At the heart of the project is a commitment to a community-centric approach. The decentralized nature of the application empowers users by granting them control over their data, fostering a sense of ownership and trust within the community. Enhanced social interactions, user-driven content curation, and the potential for community governance through smart contracts contribute to a more inclusive and participatory social media experience. By placing the community at the forefront, the project aspires to create a vibrant and sustainable ecosystem where users actively contribute to the platform's growth and development.

Security and privacy are paramount in the design and implementation of the decentralized social media web application. Utilizing Ethereum's blockchain technology ensures a secure and transparent environment for smart contract execution, safeguarding user interactions from malicious activities. IPFS integration for content storage enhances privacy by decentralizing user data, mitigating risks associated with centralized storage vulnerabilities.

ACKNOWLEDGEMENT

We would like to express our special thanks of gratitude to my guide Mr. Pravin Kumar Pandey and our Head of Department Dr. Sanjeev Gangwar who gave us the golden opportunity to do this work. We would also like to thank all our respected professors who helped us a lot in doing this work. This helped us in doing a lot of research and we came toknow about a lot of things related to this topic and it also upgraded our skills. At last, we wouldalso like to thank our parents who supported us in doing this work, and also our friends who helped us a lot in finalizing this work within the limited time frame.

TABLE OF CONTENTS

	Student's Declaration	i
	Certificate from supervisor	ii
	Abstract	iii
	Acknowledgement	iv
	Table of Contents	v
	List of figures	vi
Chapter 1	Introduction	1-3
	1.1 Motivation	1
	1.2 Problem Statement	2
	1.3 Objective	2
	1.4 Summary	3
Chapter 2	Problem Formulation and Proposed Work	4-7
	2.1 Problem Definition	4
	2.1.1 Centralized Control	4
	2.1.2 Data Privacy Risks	4
	2.1.3 Content Censorship	4
	2.1.4 Single Points of Failure	5
	2.1.5 Lack of User Control	5
	2.1.6 Security Concerns	5
	2.1.7 Need for Resilience	5
	2.1.8 Privacy Invasion	5
	2.1.9 Monopolization of User Data	5
	2.1.10 Lack of Transparency	6
	2.2 Proposed Work	6
	2.2.1 Decentralized Architecture	6
	2.2.2 User-Centric Features	6
	2.2.3 Blockchain Integration	6
	2.2.4 IPFS for Decentralized Storage	6
	2.2.5 User-Friendly Frontend	7
	2.2.6 Security Measures	7
	2.2.7 Testing and Optimization	7
Chapter 3	Literature Survey	8-10
	3.1 Methodologies	8
	3.1.1 Requirements Analysis	8
	3.1.2 Literature Review	9
	3.1.3 Technology Selection	9
	3.1.4 Architecture Design	9
	3.1.5 Prototyping	9
	3.1.6 Agile Development	9
	3.1.7 Smart Contract Development	9
	3.1.8 Frontend Development	10
	3.1.9 Integration Testing	10
	3.1.10 Security Measure Integration	10
	3.1.11 User Testing	10

	3.1.12 Optimization	10
	3.1.13 Continuous Improvement	10
Chapter 4	Modeling (ER & DFD)	11-15
	4.1 Process Model (Iterative Waterfall Model)	11
	4.1.1 Requirements Gathering and Analysis	11
	4.1.2 System Design	11
	4.1.3 Implementation	11
	4.1.4 Integration and Testing	12
	4.1.5 Deployment	12
	4.1.6 Maintenance	12
	4.2 Data flow Diagrams	12
	4.2.1 Level 0 DFD	13
	4.2.2 Level 1 DFD	14
	4.2.3 Level 2 DFD	14
	4.3 Entity Relationship Diagram	15
Chapter 5	System Requirements	16-22
	5.1 Hardware Requirements	16
	5.1.1 Server Infrastructure	16
	5.1.2 Blockchain Node	17
	5.1.3 Database Server	17
	5.1.4 IPFS Node	17
	5.1.5 Networking	17
	5.2 Software Requirements	17
	5.2.1 Operating System	17
	5.2.2 Web Server	18
	5.2.3 Database Management System	18
	5.2.4 Blockchain Node	18
	5.2.5 Smart Contract Development	18
	5.2.6 Frontend Framework	18
	5.2.7 IPFS Integration	18
	5.2.8 Version Control	18
	5.2.9 Package Managers	19
	5.2.10 Development Environment	19
	5.3 Functional Requirements	19
	5.3.1 User Authentication	19
	5.3.2 Profile Management	19
	5.3.3 Post Management	19
	5.3.4 Social Interactions	20
	5.3.5 User Relationships	20
	5.3.6 Search and Discovery	20
	5.3.7 Decentralized Storage Integration	20
	5.3.8 Security Measures	20
	5.4 Non-Functional Requirements	20

	5.4.1 Performance	21
	5.4.2 Security	21
	5.4.3 Reliability	21
	5.4.4 Scalability	21
	5.4.5 Usability	21
	5.4.6 Compatibility	21
	5.4.7 Interoperability	22
	5.4.8 Maintainability	22
	5.4.9 Privacy	22
	5.4.10 Regulatory Compliance	22
	5.4.11 Auditability	22
	5.4.12 Cost Efficiency	22
Chapter 6	Testing	23-26
	6.1 Types of Testing	23
	6.1.1 Blackbox Testing	23
	6.1.2 Whitebox Testing	24
	6.2 Levels of Testing	25
	6.2.1 Unit Testing	25
	6.2.2 Integration Testing	25
	6.2.3 System Testing	26
	6.2.4 User Acceptance Testing	26
	Conclusion	27
